

# Mareco moldflow consultancy

## MOLDFLOW ANALYSIS

Mareco uses the latest release of 'Moldflow Plastics Insight' to simulate the complex behavior of injection molded polymer melts.

Analysis results are professionally interpreted using the over 30 years of experience and knowledge of our mold-shop and injection-molding department.

All results, analysis interpretations and conclusions are summarized into a comprehensive report.

## APPLICATION AREA

The analysis goal and strategy is planned in full consultation with our customers.

When used in the earliest stage of part- and mold design, our team of specialists can identify potential manufacturing problems before they even occur. By suggesting design modifications or different process parameters, excessive costs and time delays (associated with manufacturing problems) are avoided.

*Typical Moldflow application areas:*

- part development (validation of part design)
- mold development and optimization
- process optimization (minimize cycle-time)
- troubleshooting

## MORE INFORMATION

For more information, questions or analysis quotations, please feel free to contact Mareco B.V. More information is available on our internet site.
